Profile

As a Data Science engineer graduated from TEK-UP university, I have developed a solid foundation in my field to deliver actionable insights. I am passionate about using technology to achieve impactful solutions, and I am eager to apply my expertise in a professional environment to drive innovation and optimize performance.

Education

ENGINEERING DEGREE	**TEK-UP University - Ariana**, Data Science	*2022 – 2025*
PREPARATORY CYCLE	**FSM - Monastir**, Maths - Physics	*2018 – 2021*
BACCALAUREATE	**Pioneer School of Kasserine - Kasserine**, Mathemathics	*2017*

Experience

End of Studies Internship *Club Africain, Tunis | March - August 2025*

- Designed and developed a web application for managing players' personal and sports data, integrating an intelligent system to predict potential injuries and provide personalized training recommendations.

Tools : Angular | NodeJs | MongoDB | ExpressJs | Machine Learning | Git.

SUMMER INTERNSHIP *TEK-UP, Ariana | July – August 2024*

- Developed a speech synthesis system capable of transforming written text into audible speech using deep learning for the conversion model and big data for storage and processing.

Tools : Tensorflow | PyTorch | Apache Spark | NLTK | Git.

Academic Projects

Comment Toxicity Detection *TEK-UP, Ariana | October 2024*

- Develop a deep learning model to classify toxicity in user comments using TensorFlow and Keras. It involved NLP, vectorization and building a sequential model with LSTM layers to detect categories of toxicity.

Tools : Tensorflow | Keras | LSTM | NLP | Git.

Heart Health *TEK-UP, Ariana | April 2024*

- developed a project to analyze data on heart disease involving classification algorithms such as SVM and KNN and clustering like K-Means to predict the presence of heart disease.

Tools : SVM | KNN | K-Means | Naive Bayes | Adaboost | Git.

Travel Booking *TEK-UP, Ariana | February 2024*

- Developed a predictive system to address the high cost of travel bookings by creating a dynamic price prediction model with machine learning to predict booking prices and a dashboard interface using Power BI.

Tools : SVM | KNN | K-Means | Microsoft Power BI | Git.

Tourism Analysis *TEK-UP, Ariana | December 2023*

- developed a project by processing a complex database of tourist bookings using R. It included reading the database, manipulating the data, visualizing the data, Creating interactive dashboards and writing a report.

Tools : R | R Markdown | Shiny | Tidyverse | Git.

Skills

Programming Languages: Python | R | Matlab | SQL | JavaScript | Java | C | C++.

Technologies: MySQL | MongoDB | Cassandra | ML | DL | LLMs | Fine Tuning | Power BI | Scikit-learn | TensorFlow | Keras | PyTorch | Apache Spark | Apache Airflow | JAX | Hadoop | AWS | Git.

Languages

Arabic: Native **English:** Fluent **French:** Fluent
